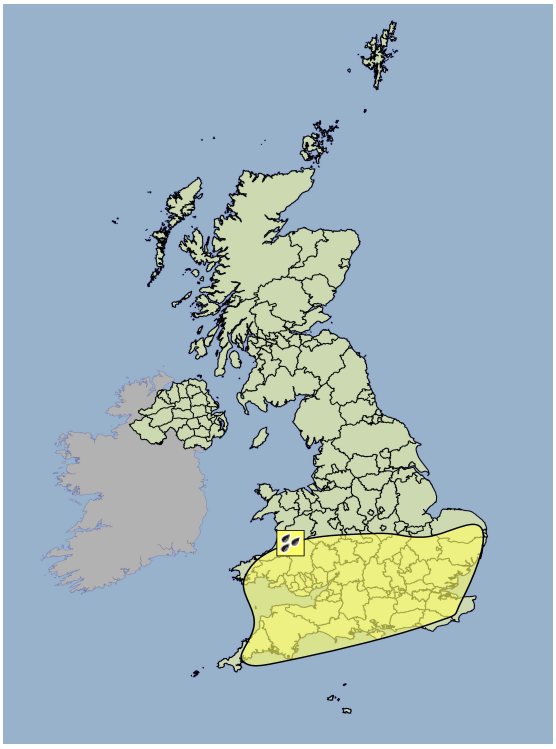
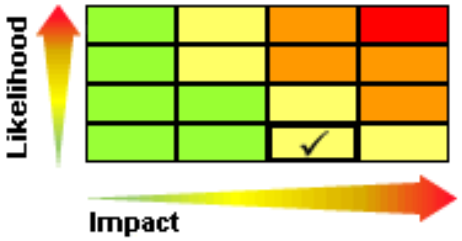
National Severe Weather Warning Service





Chief Forecasters Assessment
A slack area of low pressure remains aligned across southern Britain during the rest of Saturday, this containing moist and deeply unstable air. Daytime heating will again assist the development of heavy showers and thunderstorms, with the focus rather further south than on Friday. These showers and storms are likely to be slow-moving, with some places receiving 15-20 mm of rain in an hour or less, and very locally perhaps 40 mm or so within 2 or 3 hours. Lightning and hail will be additional hazards. As is the nature of showers, some places will escape the heavier downpours, while a gradual reduction of thundery activity is expected to take place form the north later in the day.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:00 on Sat, 28th Jun 2014** until **23:00 on Sat, 28th Jun 2014**

Further slow-moving downpours will develop during today, often accompanied by lightning and more locally bringing the risk of hail. The public should be aware that the downpours may lead to localised surface water flooding and potential disruption to transport and outdoor events.

This is an update of the warning first issued on Thursday, with minor changes to the areas at risk.
